The Cisco Catalyst™ IE3100 Rugged Series delivers mainstream adoption of Gigabit Ethernet connectivity in a compact, fixed form-factor switch that is purpose-built for a wide variety of rugged enterprise and industrial applications in the most space constrained scenarios.

Product overview

Cisco Catalyst IE3100 Rugged Series switches with up to 20 Gigabit Ethernet interfaces deliver high-speed Gigabit Ethernet connectivity in a compact form factor and are designed for a wide range of industrial applications for which hardened products are required. This platform is built to withstand harsh environments in manufacturing, energy, transportation, mining, smart cities, and oil and gas. The IE3100 is ideal for space constrained deployments often found in distribution centers, warehouses, and outdoor spaces.

These switches run Cisco IOS® XE, an operating system with built-in security and trust, featuring Secure Boot, image signing, and the Cisco® Trust Anchor module. Cisco IOS XE also provides API-driven configuration with open APIs and data models.

The Cisco Catalyst IE3100 Rugged Series can be managed with powerful management tools such as Cisco Catalyst Center or easily configured through the redesigned, modern, and user-friendly WebUI. Cisco AI Troubleshooting for Industrial Networks provides powerful agentic capabilities that empower OT teams to quickly detect, diagnose, and resolve network issues while reducing unnecessary escalations.

The IE3100 supports PoE with a power budget of up to 240W for PoE/PoE+/4PPoE and is ideal for connecting PoE-powered end devices such as IP and PTZ cameras, phones, wireless access points, sensors, and more.

The IE3100 Rugged Series switches offer:

- Models offering 6, 10, 12, or 20 Gigabit Ethernet ports with up to 4 Gigabit SFP uplink ports or 2 Gigabit Combo uplink ports.
- Support for up to 8 PoE/PoE+ ports or up to 6 PoE/PoE+ and 2 4PPoE ports with a maximum power budget of 240W.
- Robust resiliency enabled by features such as Media Redundancy Protocol (MRP), Resilient Ethernet Protocol (REP), and dual-input DC power supplies.
- Simplified software management with universal images.
- Support for industrial automation protocols EtherNet/IP (CIP), Modbus and PROFINET.
- Support for Layer-2 Network Address Translation.[1]

Features and benefits

Table 1. Features and benefits

Feature	Benefit
Robust industrial design	• Built for harsh environments and temperature ranges (-40° to 75°C / -40° to 167°F) • Fanless, convection-cooled with no moving parts for extended durability • Hardened for vibration, shock and surge, and electrical noise immunity • Complies with multi-industry specifications for automation, Intelligent Transport Systems (ITS), and substation environments • Improves the uptime, performance, and safety of industrial systems and equipment • Alarm I/O for monitoring and signaling to external equipment
Full Gigabit Ethernet switch	• Up to 20 Gigabit Ethernet ports provide multiple resilient design options • Provides secure access for new high-speed applications in the industrial space • Allows IP-based Supervisory Control And Data Acquisition (SCADA) connectivity • Delivers multiple rings, redundant ring topology for new network configurations • Extends geographical scalability where connectivity over longer distances is required
Power over Ethernet (PoE)	• Support for up to 8 Ports of Power over Ethernet with 802.3af, 802.3at and 802.3bt (Type 3 and Type 4) options with a maximum PoE budget of up to 240W • Controls costs by limiting wiring, distribution panels, and circuit breakers • Reduces equipment needs, thus requiring less space and reducing heat dissipation • Enables ready-to-use PoE devices, such as IP phones, vision cameras, next-generation PTZ cameras, and wireless access points • **PoE Boost Support:** Delivers power even with DC power input as low as 12VDC • **PoE Support:** PoE power is maintained during a switch reload. This is important for IoT endpoints such as PoE-powered lights, so the device does not completely power off • **Fast PoE Support:** When power is restored to a switch, PoE starts delivering power to endpoints without waiting for the operating system to fully load, thereby speeding up the time for the endpoint to start up
Redundancy and Resiliency	• Resilient Ethernet Protocol (REP) • Media Redundancy Protocol (MRP) • Fast Media Redundancy Protocol (Fast MRP) • G.8032 Ethernet Ring Protection (ERP) Protocol, version 1

Feature	Benefit
Advanced management	• Easy configuration and monitoring through user-friendly WebUI that reduces cost of deployment and eliminates the need for complex emulation programs • Centralized infrastructure management with template-based configuration, network automation and assurance using Cisco Catalyst Center • Cisco's AI Troubleshooting agentic system detects and diagnoses network issues, and helps non expert users solve them faster
Industrial automation protocols	• EtherNet/IP (CIP), Modbus, SCADA, GOOSE and PROFINET MRP (IEC 62439-2) allow integration with existing management platforms from Rockwell, Siemens, and others • IEEE 1588v2 Precision Timing Protocol (PTP) (both power profile for utility and default profile for manufacturing are supported) • gRPC mTLS Stream Telemetry

[1] Max Current and Inrush current should be used for sizing power supplies and electrical wiring.

[2] Power Consumption should be used for thermal load and battery capacity.

[3] Power consumption varies with the local ambient temperature, the input voltage, and the number/type of active interfaces. Please see the IE-310x Power Estimator for more detailed power consumption.

[4] For BTU/hr, please convert the Power Consumption watts to BTU/hr.

[5] Power consumption does not include PoE Power.
