Introduction

This document describes how to integrate AMP for Endpoints with FMC for event data integration.

Issue

Integrate AMP for Endpoints with FMC so FMC can receive AMP for Endpoints event data.

Environment

- Firepower Management Center (FMC) with access to the **AMP** menu.
- Advanced Malware Protection (AMP) for Endpoints account with valid credentials for the appropriate AMP cloud (for example, US, EU, APJC).
- Browser access from the FMC UI to the AMP for Endpoints cloud for the authorization redirect.
- FMC version 6.x ,7.X.
- The article references the legacy navigation path **AMP > AMP Management > Add AMP Cloud Connection**, which corresponds to **Firepower Management Center 6.x** and applies generally across FMC 6.0 through 7.x

Resolution

Note: This integration sends event data from AMP for Endpoints to FMC in one direction only. This procedure does not integrate configuration settings.

Complete these steps to register the AMP for Endpoints cloud connection in FMC:

1. Confirm access to the FMC and the AMP menu.

2. Confirm valid AMP for Endpoints credentials for the AMP cloud to register.

3. From FMC, click **AMP > AMP Management**.

6. Click **Yes** to allow redirection to the **AMP for Endpoints** console.

7. Log in to **AMP for Endpoints**.

8. Click **Allow** to authorize the AMP to FMC connection.

9. Return to the **FMC** browser tab.

- Verify that the Cisco AMP Solution Type field displays **AMP for Endpoints and AMP for Networks** and that the **State** field shows a blue checkmark.
