

12V DC output for third party device

This reference provides the technical requirements and output capabilities for the 12V DC power interface.

- 12V DC outputs, on page 1

12V DC outputs

The 12V DC output for 3rd party devices provides 1 Amp of power at 12V with current limiting at 1.5A and fuse protection at 5A. Output is 12V +/- 10%.

To enable 12v-output, enter the following command in global configuration mode:

```
Router(config)# platform 12v-output enable
```

To disable 12v-output, enter the following command in global configuration mode:

```
Router(config)# no platform 12v-output enable
```

Note PoE and 12V configuration are mutually exclusive.
