New and Changed Information

This chapter provides release-specific information for each new and changed feature in the Cisco Nexus Dashboard Data Broker Configuration Guide, Release 3.10.4.

Table 1: New and Changed Features

Feature	Description	Where Documented
Preferred Primary Node in a Cluster	While configuring a cluster, the first node in the list of supernodes entered in the `config.ini` file is the primary node of the cluster.	Logging in and Managing chapter
Standby Node in a Cluster	While configuring a cluster, you can add a fourth node as a standby node in the `config.ini` file. This node comes into play only when two nodes of the cluster are *down*.	Logging in and Managing chapter
Refresh Fabric button addition	To fetch the latest ACI fabric details, the **Refresh Fabric** button has been introduced. This is available while you are configuring the span sessions and the input ports.	Components chapter
Save button addition	All Edit screens have been modified to display the **Save** button after you have edited a parameter.	Across this document.
