# Preface

## Audience

This publication is for network administrators who configure and maintain Cisco Nexus devices.

## Document Conventions

**Note** As part of our constant endeavor to remodel our documents to meet our customers' requirements, we have modified the manner in which we document configuration tasks. As a result of this, you may find a deviation in the style used to describe these tasks, with the newly included sections of the document following the new format.

Command descriptions use the following conventions:

| Convention | Description |
|---|---|
| **bold** | Bold text indicates the commands and keywords that you enter literally as shown. |
| *Italic* | Italic text indicates arguments for which the user supplies the values. |
| [x] | Square brackets enclose an optional element (keyword or argument). |
| [x \| y] | Square brackets enclosing keywords or arguments separated by a vertical bar indicate an optional choice. |
| {x \| y} | Braces enclosing keywords or arguments separated by a vertical bar indicate a required choice. |
| [x {y \| z}] | Nested set of square brackets or braces indicate optional or required choices within optional or required elements. Braces and a vertical bar within square brackets indicate a required choice within an optional element. |
| `variable` | Indicates a variable for which you supply values, in context where italics cannot be used. |

| Convention | Description |
|---|---|
| string | A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks. |

Examples use the following conventions:

| Convention | Description |
|---|---|
| `screen font` | Terminal sessions and information the switch displays are in screen font. |
| **`boldface screen font`** | Information you must enter is in boldface screen font. |
| *italic screen font* | Arguments for which you supply values are in italic screen font. |
| < > | Nonprinting characters, such as passwords, are in angle brackets. |
| [ ] | Default responses to system prompts are in square brackets. |
| !, # | An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line. |

This document uses the following conventions:

**Note** Means *reader take note*. Notes contain helpful suggestions or references to material not covered in the manual.

**Caution** Means *reader be careful*. In this situation, you might do something that could result in equipment damage or loss of data.

# Introduction

This document describes the Cisco NX-OS configuration limits for Cisco Nexus 9000 Series switches.

The values provided in this guide should not be interpreted as theoretical system limits for Cisco NX-OS hardware or Cisco NX-OS software. These limits refer to values that have been validated by Cisco. They can increase over time as more testing and validation is done.

## Verified Scalability Limits - Unidimensional

The tables in this section list the verified scalability limits for the Cisco Nexus 9000 Series switches for Cisco NX-OS Release 10.3(2)F.

These limits are validated with a unidimensional configuration. The values are provided in these tables focus on the scalability of one particular feature at a time.

Each number is the absolute maximum that is currently supported by this Cisco NX-OS release for the corresponding feature. If the hardware is capable of a higher scale, future software releases could increase this verified maximum limit. Results might differ from the values that are listed in this guide when you try to achieve maximum scalability with multiple features enabled.

**Note**

1. If only one number is provided, the verified limit applies to all supported platforms and line cards.
2. Verified limits are provided only for supported platforms.
3. If a feature is not supported for a particular platform, the verified limit is not provided.

**Note** You can deploy up to 500 commands under config-profile.

***Table 1: Cisco Nexus 2000 Series Fabric Extenders (FEX) Straight Through Mode Verified Scalability Limits (Unidimensional)***

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| Fabric Extenders[1] and Fabric Extender server interfaces | Nexus 9300-EX/FX/FX2/FX3/GX switches | 16 and 768 |
| VLANs across all Fabric Extenders | Nexus 9300-EX/FX/FX2/FX3/GX switches | 562 |
| VLANs per Fabric Extender server interface[2] | Nexus 9300-EX/FX/FX2/FX3/GX switches | 75 |
| Port channels | Nexus 9300-EX/FX/FX2/FX3/GX switches + FEX | 511 |

[1] When FEX configured using "AA" mode, then the maximum number of 6 FEX on the NFE base ToR and 16 FEX for the LSE base ToR are supported.

[2] For FEX HIF port channels, Cisco recommends that you enable STP port type edge using the **spanning tree port type edge [trunk]** command.

***Table 2: ePBR Verified Scalability Limits (Unidimensional)***

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| Maximum services per switch | Nexus 9300 and 9500 switches | 150[3] |
| Endpoints per service | Nexus 9300 and 9500 switches | 32 |
| ePBR policies per switch | Nexus 9300 and 9500 switches | 150 |
| Policies per VRF | Nexus 9300 and 9500 switches | 16 |
| Services per chain | Nexus 9300 and 9500 switches | 6 |
| Match per policy. | Nexus 9300 and 9500 switches | 16 |
| Aces per match | Nexus 9300 and 9500 switches | 256 |

[3] Only 62 unique ACLs can be configured per slice of ASIC. Each ACL takes one label. If the same ACL is configured on multiple interfaces, the same label is shared. If each ACL has unique entries, the ACL labels are not shared, and the label limit is 62. In order to achieve 150 services per switch with the limitation of 62 ACLs per slice, the ingress interfaces should be spread across multiple slices of ASIC.

**Note**

1. For a list of platforms on which ePBR is supported, see the Cisco Nexus 9000 Series NX-OS ePBR Configuration Guide.
2. For the ACL limitations, see the Cisco Nexus 9000 Series NX-OS Security Configuration Guide.

***Table 3: FC and FCoE Switch Level Configuration Limits (Unidimensional)***

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| FLOGI per port | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 256 |
| FLOGI per switch | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 1000 |
| Port channels | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 8[4] |
| Maximum number of member ports in a port channel | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 16 |
| NPV switches per NPIV core switch | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 8[5] |

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| Maximum number of FC ports supported | Nexus 93180YC-FX switches | 48 |
| | Nexus 93360YC-FX2 switches | 96 |
| | Nexus 9336C-FX2-E switches | 112 |
| VFCs | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 512[6] |
| VSANs | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 32 |

[4] The number of SAN port channels and virtual FC port channels, together, can be only 8 on the Cisco Nexus 9000 Series switch.
[5] Tested with FC NPV.
[6] This is applicable only for the NPV mode.

***Table 4: FC and FCoE Fabric Level Configuration Limits (Unidimensional)***

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| Zones | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 8000 |
| Zone members | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 16,000 |
| Zone sets | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 32 |
| Zone database size | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 2 MB |
| FCNS entries in the fabric | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 10,000 |
| Device Alias | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 8000 |
| Switch hops from server to storage | Nexus 93180YC-FX, 93360YC-FX2, and 9336C-FX2-E switches | 7 |

***Table 5: Intelligent Traffic Director Verified Scalability Limits (Unidimensional)***

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| Nodes per device group | Nexus 9300-FX/FX2/FX3/GX/GX2 switches | 64 |
| | N9K-X96136YC-R, N9K-X9636Q-R, N9K-X9636C-R, and N9K-X9636C-RX line cards | 16 |

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| ITD services per switch | Nexus 9300-FX/FX2/FX3/GX/GX2 switches | 150 [7] |
| Buckets per ITD service | Nexus 9300-FX/FX2/FX3/GX/GX2 switches | 256 |
| | Nexus X96136YC-R, X9636Q-R, X9636C-R, and X9636C-RX line cards | 64 |

[7] Only 62 unique ACLs can be configured per slice of ASIC. Each ACL takes one label. If the same ACL is configured on multiple interfaces, the same label is shared. If each ACL has unique entries, the ACL labels are not shared, and the label limit is 62. In order to achieve 150 ITD services per switch with the limitation of 62 ACLs per slice, the ingress interfaces should be spread across multiple slices of ASIC.

**Note**

1. For a list of platforms on which ITD is supported, see the *Cisco Nexus 9000 Series NX-OS Intelligent Traffic Director Configuration Guide*.
2. For the ACL limitations, see the *Cisco Nexus 9000 Series NX-OS Security Configuration Guide*.

***Table 6: Interfaces Verified Scalability Limits (Unidimensional)***

| Feature | Supported Platforms | Verified Limits |
|---|---|---|
| DHCP clients per switch | Nexus 9300-EX/FX/FX2/FX3 switches | 10 (IPv4) + 10 (IPv6) |

| **SRTE Policy** | | |
| SRTE policy with PBR | Nexus 9300-FX/FX2/FX3/GX/GX2 and 9364C switches | 512 per slice with 4 way ECMP/1024 per slice with 2 way ECMP |
| Number of route-maps with SRTE policy (IPv4/IPv6) | Nexus 9300-FX/FX2/FX3/GX/GX2 and 9364C switches | 256 (IPv4) + 256 (IPv6) per slice with 4 way ECMP |

[8] For Cisco Nexus 9300 and 9500 Series switches, LSPs *ECMP* label stack push cannot exceed 1500.
[9] N9K-X9636C-RX, N9K-X9636C-R, N9K-X9636Q-R, and N9K-96136YC-R

**Note**

- For network scalability, Cisco recommends using a hierarchical routing design with multi-hop BGP for advertising the attached prefixes from a top-of-rack (ToR) or border leaf switch.

| | Nexus 9600-R and 9600-RX line cards | 250 |
| Total number of VLANs × ports with switch port isolated (3967 VLANs x 48 ports) | Nexus 9300-EX/FX/FX2/FX3/GX/GX2, 9408 switches, and Nexus 9700-EX/FX and N9K-X9716D-GX line cards | 190,000 |
| Total number of VLANs × ports with switch port isolated (3967 VLANs x 144 ports) | Nexus N9K-X9636C-R, N9K-X9636Q-R, N9K-X9636C-RX, and N9K-X96136YC-R line cards | 571,248 |

[10] Layer 2 unidimensional scale only. SVI, Layer 3 interface, and VXLAN VLANs are not supported. 200K MAC is enabled only when " system routing template-l2-heavy" is configured and the system is reloaded.

[11] On EOR, support is for 12,000 PV count with 3967 vlans and RPVST with default timers. If 22,000 PV count is needed with 3968 vlans and RPVST, recommended hello timer value is 4 or higher. It is also recommended to tune forward delay and max age accordingly.

**Note**

- For more information on STP scale considerations, see Spanning Tree Protocol scale considerations, on page 58.
- The number of supported VLANs per vPC should be within the MST or RPVST virtual port count that is specified in this table, depending on the topology.
- The number of supported STP VLAN port instances, for Fabric Extender host interface ports, should be less than 13000.
- The ports with switch port isolated are only supported on Layer 2 ports. However, on Layer 2 the following port types are not supported:
  - FEX host interfaces
  - FEX host interface port channels
  - PVLAN ports

[12] All line cards must have the FX type.
[13] All line cards must have the FX type.

**Note**

- The IPv4 multicast routes and the IPv4/IPv6 host routes share the same hardware table. Limits are provided for both the default line card mode and the max host line card mode.
- High availability (graceful restart and stateful switchover) is not supported when unicast or multicast aggressive timers are configured at any scale.
- The hash table is subject to collisions. Depending on the host route pattern, collisions might occur with an expected hashing efficiency of about 80%.

[14] Each IPv6 ACL is limited to 1000 ACEs. This applies to all IPv6 ACLs (RACL, QoS or SPAN filter). No such limitation applies for IPv4 ACL.

**Note**

- The TCAM entries scalability limits also apply to policy-based TCAM entries (PBACLs).
- Only 62 unique ACLs can be configured. Each ACL takes one label. If the same ACL is configured on multiple interfaces, the same label is shared. If each ACL has unique entries, the ACL labels are not shared, and the label limit is 62.

[15] A single forwarding engine instance supports four SPAN or ERSPAN sessions. For Cisco Nexus 9300 Series switches, if the first three sessions have bidirectional sources, the fourth session has hardware resources only for Rx sources. This limitation might also apply to Cisco Nexus 9500 Series switches, depending on the SPAN or ERSPAN source's forwarding engine instance mappings.

[16] The number of SPAN or ERSPAN sessions per line card reduces to two if the same interface is configured as the bidirectional source in more than one session.

*Table 18: NetFlow Scalability Support (Flows) for Cisco Nexus 9500 Family Switches*

| Feature | Platform | Scale Limitper Slice (Flows) |
|---|---|---|
| IP flow monitor | Nexus 9500-EX Line cards | 2 |
| IPv6 flow monitor | | 2 |
| Layer 2 Flow monitor | | 1 |
| Maximum number of exporters per each flow monitor | | 2 |
| Flow Scale | | 24,000 per ASIC slice |
| IP flow monitor | Nexus 9500-FX Line cards | 30 |
| IPv6 flow monitor | | 28 |
| Layer 2 Flow monitor | | 1 |
| Maximum number of exporters per each flow monitor | | 2 |
| Flow Scale | | 24,000 per ASIC slice |

**Note** NetFlow scale limits are determined based on the interfaces of the line cards where the NetFlow configurations are attached in the modular switches.

*Table 19: NetFlow SVI Verified Scalability Limits (Unidimensional)*

| Platform (VLAN Ports) | SVI | | | VLAN | | | SVI + VLAN | | |
|---|---|---|---|---|---|---|---|---|---|
| | IPv4 | IPv6 | IPv4 + IPv6 | IPv4 | IPv6 | IPv4 + IPv6 | IPv4 | IPv6 | IPv4 + IPv6 |
| Member ports from Cisco Nexus 9300-EX switches | 474 | 118 | 94 | 474 | 118 | 94 | 237 | 61 | 38 |
| Member ports from Cisco Nexus 9300-FX switches | Total interfaces supported in the system | | | | | | | | |

| Platform (VLAN Ports) | SVI | | | VLAN | | | SVI + VLAN | | |
|---|---|---|---|---|---|---|---|---|---|
| | IPv4 | IPv6 | IPv4 + IPv6 | IPv4 | IPv6 | IPv4 + IPv6 | IPv4 | IPv6 | IPv4 + IPv6 |
| Member ports from Cisco Nexus 9300-EX and Nexus 9300-FX switches (EOR chassis) | 474 | 118 | 94 | 474 | 118 | 94 | 237 | 61 | 38 |

**Note** The scale numbers are based on the TCAM space available on the Cisco Nexus 9300-EX and Nexus 9300-FX switches. A IPv4 flow monitor uses 2 and 4 TCAM space for the Cisco Nexus 9300-EX and Nexus 9300-FX switches respectively. Similarly, a IPv6 flow monitor uses 8 and 2 TCAM space for the Cisco Nexus 9300-EX and Cisco Nexus 9300-FX switches respectively.

For port channels, SVIs, and VLANs that have port from both 9300-EX and 9300-FX switches, the lower common denominator limit of the 9300-EX and 9300-FX switches is applied.

[18] If you have more than 490 groups, then only one group per SVI. SVIs cannot have a user defined MAC or any VRRP group with it.
[19] For vPC configuration, HSRP maximum scale is 16 groups, 15 groups with vPC peer-gateway configured.
[20] The hash table is subject to collisions. Depending on the host route pattern, collisions might occur.
[21] The hash table is subject to collisions. Depending on the host route pattern, collisions might occur.

[23] Internet profile with additional IPv4 routes (total of 914K routes consisting of IPv4 and 62K of IPv6)
[24] Internet profile with additional IPv6 routes (total of 871K routes consisting of IPv6 and 696K of IPv4)
[25] If the user has Multi-protocol configuration, user should configure appropriate CoPP policies to avoid any control plane traffic drops.

**Note** With IPv6 scale, traffic loss could be there for a few seconds during switchover.

**Note** The maximum number of PBR next-hops based on 4 FM-E supported is 192 per slice of the forwarding engine

- The IPv4/IPv6 host routes and the IPv4 multicast routes share the same hardware table. Limits are provided for both the default line card mode and the max host line card mode.
- The IPv4 and IPv6 unicast routes share the same hardware table. Limits are provided for both the default line card mode and the max host line card mode.
- High availability (graceful restart and stateful switchover) is not supported when unicast or multicast aggressive timers are configured at any scale.

Guidelines and Limitations for OSPF Verified Scalability Limits

- To achieve the highest scale, we recommend that you use a single OSPF instance instead of multiple instances.
- Each OSPFv2 and OSPFv3 scale value might vary when combined with other parameters.
- The graceful restart timeout value might be increased in multidimensional scenarios.

| V4 routes | Nexus 9300-EX/FX/FX2/FX3/GX/GX2, Nexus 9408, and 9364C switches | 10,000 |

[26] In case of IR, each VNI can have a max of 64 peers.
[27] All the other BGW numbers (number of supported L2VNIs, L3VNIs, MAC addresses, IP addresses, and so on) match the values supported on a generic VXLAN EVPN VTEP node.
[28] Total number of Cloudsec Security Associations in hardware = 128 (M *N*L) where (M = no. of Cloudsec peers, N = no. of uplinks on each Cloudsec endpoint, L is number of border gateway nodes)
[29] Multi-Site enabled with TRM supported number of L2VNIs –1000 and L3VNIs –100. Maximum supported multicast underlay and overlay route is 8000. From Cisco NX-OS Release 10.2(3), Multi-Site enabled with TRM supported number of L3VNIs –250. Maximum supported multicast underlay and overlay route is 32000 for Nexus 9700-FX/FX3/GX/GX2 and 8000 for Nexus 9700-EX/FX2 and N9K-C9508.
[30] Total number of Cloudsec Security Associations in hardware = 128 (M *N*L) where (M = no. of Cloudsec peers, N = no. of uplinks on each Cloudsec endpoint, L is number of border gateway nodes)
[31] Number of vrfs * number of sites = 1000
[32] VXLAN underlay and overlay multicast routes shares the same hardware table. Maximum Multicast routes is 8000 in the default mode. If you want more overlay route scale, reduce the underlay multicast control group.
[33] In case of IR, each VNI can have a maximum number of 64 peers; 512 peers supported on 100 VNIs only.
[34] This is the limit for the Cisco Nexus 93180YC-EX and other fiber based switches. All copper based 9300-EX switches are not applicable.
[35] Only one provider VLAN is supported.
[36] The maximum number of Layer-2 subinterfaces is based on the available entries allocated for ing-pacl-sb tcam region.
[37] Since Nexus 9300-EX and 9300-FX have only one slice, the maximum number of Layer-2 subinterfaces that can be created is lower than the limit for NExus 9300-FX2.
[38] The full scale of 3900 L3VNI is only supported on the platforms with >24G memory. Nexus 93240YC-FX2, 93360YC-FX2, 93216TC-FX2, 93108TC-FX3P, 93180YC-FX3 would require add-on memory to support extended 3900 L3VNI scale. Nexus N9K-C9358GY-FXP and N9K-C92348GC-X can not support extended scale.
[39] Only 1900 SVI are supported if dual stack is used/IPv6 is used.
[40] ECMP objects are not shared across multiple VRFs.
[41] The full scale of 2000 L3VNI is only supported on the platforms with >24G memory. Nexus 93240YC-FX2, 93360YC-FX2, 93216TC-FX2, 93108TC-FX3P, 93180YC-FX3 would require add-on memory to support extended 2000 L3VNI scale. Nexus N9K-C9358GY-FXP and N9K-C92348GC-X can not support extended scale.Switches with <24G memory supports 2000 L2VNIs and 900 L3VNIs.
[42] All /64 routes + 4000 for non /64 routes.
[43] All /64 routes + 4000 for non /64 routes.
[44] All /64 routes + 4000 for non /64 routes.
[45] Only 1900 SVI are supported if dual stack is used/IPv6 is used.
[46] ECMP objects are not shared across multiple VRFs.
[47] All /64 routes + 4000 for non /64 routes.
[48] All /64 routes + 4000 for non /64 routes.
[49] All /64 routes + 4000 for non /64 routes.

## Spanning Tree Protocol scale considerations

Spanning Tree Protocol (STP) scalability is assessed using two main metrics, each representing a different dimension of scale:

1. **STP Virtual Port Scale**

   **Definition**: Represents the total number of STP entities managed, considering both internal STP data structures and port-level MAC programming/VLAN allow lists.

   **Calculation**: Virtual Port Scale = (Number of physical STP-managed ports) × (Number of VLANs carried by those ports)

   **Example (RPVST)**:

   - 100 VLANs
   - 4 individual L2 interfaces
   - 2 L2 port-channels (each with 8 member interfaces)
   - Calculation:

     (4 individual interfaces + 2 port-channels × 8 members each) × 100 VLANs

= (4 + 16) × 100 = 2000 Virtual Ports

**Note** All port-channel members are included in this calculation.

**MST Scenario**:

For Multiple Spanning Tree (MST), multiply the number of physical interfaces by the number of VLANs in the carried MST instances. If all 100 VLANs are in the same instance, the result is the same (2000 Virtual Ports).

2. **STP Logical Port Scale**

   **Definition**: Measures the maximum STP BPDU load per hello interval, especially relevant for RPVST, which generates a BPDU per VLAN. This metric helps evaluate control plane scalability. Hence, MST is recommended for large-scale environments, as it reduces Logical Port Scale concerns.

   **Calculation**: Logical Port Scale = (Number of individual L2 interfaces + Number of port-channels) × (Number of VLANs carried)

   **Example**:

   - 100 VLANs
   - 4 individual L2 interfaces
   - 2 L2 port-channels
   - Calculation:

     (4 interfaces + 2 port-channels) × 100 VLANs

     = 6 × 100 = 600 Logical Ports

   **Note** Port-channel members are not included in this calculation.

**Note**

- All computation will vary if interfaces have unique VLAN pruning lists or have different MST instances with unique VLAN counts. Always review STP scalability against actual hardware/software limits.
- For large deployments, prefer MST to minimize BPDU processing overhead.

# Verified Scalability Limits - Multidimensional - 9500 R-Series

The tables in this section list the verified scalability limits for the Cisco Nexus 9508 switch with an X9636C-R, X9636C-RX, or X9636Q-R line card or a C9508-FM-R fabric module and Cisco Nexus 9504 with -R line cards. These limits are validated with a multidimensional configuration. The values provided in these tables focus on the scalability of all listed features at the same time.

**Note** These numbers are not the maximum verified values if each feature is viewed in isolation. For these numbers, see the corresponding "Verified Scalability Limits" section.

# Deployment Case Studies

This section provides sample topologies for some common deployments. For each topology, the scalability numbers are the limits with all of the listed features enabled at the same time.

**Attention** These numbers are not the maximum verified values if each feature is viewed in isolation. For these numbers, see the "Verified Scalability Limits" section.

## VXLAN BGP/eVPN iBGP Centric Topology

This VXLAN BGP/eVPN iBGP centric topology consists of Cisco Nexus 9300 and 9500 Platform switches acting as VXLAN vPC tunnel endpoints (VTEPs) and VXLAN non-vPC VTEPs. VXLAN VTEPs establish iBGP sessions to a Cisco Nexus 9508 switch (route reflector) acting as a spine node. VXLAN-distributed anycast gateway SVIs are configured for dual stack, and the traffic is dual stack.

The focus of this topology is to test VXLAN overlay network scale and underlay Layer 2 switching and other routing, multicast, and Layer 4 through Layer 7 features for management and operations. Underlay PIM neighbors and IS-IS adjacency were tested with the default timer and Bidirectional Forwarding Detection (BFD) enabled on all links.

In the following table, the Verified Limit column lists the verified scaling capabilities with all listed features enabled at the same time. These numbers are not the maximum verified values if each feature is viewed in isolation.

***Table 32: VXLAN BGP/eVPN iBGP Centric Topology***
