MLSM-6-VLAN_INSTALL_FAILURE	6-Information	Unable to locate secondary-vlan for [node]i[dec]	This message happens when RP was not able to determine the secondary vlan for the source in secondary vlan. After finite retries RP gives up installing the shortcut in hardware. This can happen when a new flow is installed or when there is a RPF change. In such situations flow will be software switched.	cat6000-mmls	"Make sure ARP table is populated for sources in secondary vlan by explicity 'ping'ing the source and the ARP table should contain the primary as well as secondary vlan information. To enable creation of hardware shortcut do a 'clear ip mroute <group> <source>' for the specific flow."
MLSM-6-SCP_ERROR	6-Information	MMLS: SCP failure detected between RP and SP	This can happen when EOBC channel is too busy or NMP is too busy so that draco side does not get response even after few retries by ICC layer.	cat6000	"Under some stressful condition when communication between RP and SP side can not be maintained this message will be printed. MMLS will keep trying to recover from situation by sending message to SP. The restart message to SP has exponential back off upto 160 second"

RSVP-3-RSVP_AUTH_CHALLENGE_NOT	3-Error	No response to challenge issued to [node]for key ID [node]	The router sent an RSVP message to challenge the untrusted source to\n\ compute a secure hash on a random piece of data and return the hash\n\ with the same data but the source did not reply. The source may\n\ have crashed or lost its network connection. However it is also\n\ possible that the source was unsuccessfully attempting to spoof a message from another source. RSVP-4-AUTH_DUPLICATE_KEYID	4-Warning	Key chains [chars] and [chars] contain duplicate key ID %u	An attempt is being made to add a new key identifier to a key chain in\n\ the router configuration but RSVP detected that this identifier is found\n\ in another key chain already assigned to RSVP. Since key identifiers must\n\ be unique across all the key chains used by RSVP RSVP will not use the\n\ keys with this identifier in all such key chains. This could cause RSVP\n\ authentication to fail in some cases.	rsvp	"Update the listed key chains so they use different key identifiers."

Facility-Severity-Mnemonic	Severity-Meaning	Message	Message-Explanation	Component	Recommended-Action
			The ACL specified in the message text associates the key chain specified\n\ in the message text with a set of RSVP neighbors. RSVP uses the specified\n\ key chain to authenticate each RSVP message exchanged with that set of\n\ RSVP neighbors after the association is configured. Subsequently the\n\ specified ACL has been reconfigured such that the key chain association\n\ is no longer valid for one or more RSVP neighbors in the set. This causes\n\ RSVP to search the configuration for another suitable key chain to use\n\ with those neighbors. If no such key chain is found RSVP will no longer\n\ be able to provide authentication for messages exchanged with those RSVP\n\ neighbors. This causes RSVP to discard RSVP messages from that set of\n\ neighbors. Because this may ultimately lead to loss of RSVP functionality\n\ with those neighbors RSVP generates this system message.		

Facility-Severity-Mnemonic	Severity-Meaning	Message	Message-Explanation	Component	Recommended-Action
			This system\n\ message may also be generated if the ACL is subsequently changed so that\n\ it re-associates RSVP neighbors with the specified key chain. If RSVP is\n\ not using another key chain for the set of RSVP neighbors specified by\n\ the ACL RSVP will begin using the specified key chain to exchange\n\ authenticated RSVP messages with that set of RSVP neighbors potentially\n\ restoring RSVP functionality with those neighbors.
