Unsupported Commands in Cisco ASR 1000 Series Routers

The Cisco ASR 1000 Series Routers contain a series of commands with the **platform** keyword that either produce no output or produce output that is not useful for customer purposes. Although some commands with the **platform** keyword produce output that is useful for customer purposes, and are therefore documented in the Cisco IOS XE command references, the vast majority of these commands are not useful for customer purposes and are therefore considered unsupported.

Because these commands are considered unsupported, you will not find any further Cisco documentation for any of these commands.

Following is the list of unsupported commands for the Cisco ASR 1000 Series Routers:

- clear platform hardware cpp
- clear platform software access-list
- clear platform software adjacency
- clear platform software cce
- clear platform software cef
- clear platform software cman
- clear platform software dpidb
- clear platform software ess
- clear platform software icmp
- clear platform software infrastructure
- clear platform software inspect
- clear platform software mlp
- clear platform software mpls

- clear platform software multicast
- clear platform software nat
- clear platform software nbar
- clear platform software netflow
- clear platform software pam
- clear platform software qos
- clear platform software route-map
- clear platform software shell
- clear platform software wccp
- clear platform software zone
- clear platform software zone-pair
- debug platform all
- debug platform hardware cpp
- debug platform software acl
- debug platform software adjacency
- debug platform software cce
- debug platform software cef
- debug platform software cman
- debug platform software configuration
- debug platform software dpidb
- debug platform software entity
- debug platform software ess
- debug platform software FPM
- debug platform software icmp
- debug platform software infrastructure
- debug platform software inspect
- debug platform software iphc
- debug platform software ipsec
- debug platform software issu
- debug platform software kernel
- debug platform software liin
- debug platform software marmot
- debug platform software mlp

- debug platform software mpls
- debug platform software multicast
- debug platform software nat
- debug platform software nbar
- debug platform software netflow
- debug platform software pam
- debug platform software qos
- debug platform software route-map
- debug platform software shell
- debug platform software urpf
- debug platform software vty
- debug platform software wccp
- debug platform software zone
- set platform software trace
- **show crypto engine**
- show platform hardware cpp (all commands)
- show platform software access-list
- show platform software adjacency
- show platform software bound-uds
- show platform software cce statistics
- show platform software cef counters
- show platform software cman statistics
- show platform software common-classification
- show platform software debug
- show platform software diagnostic
- show platform software dpidb
- show platform software erspan
- show platform software ess
- show platform software firewall
- show platform software flow-control identifier
- show platform software fpm
- show platform software icmp
- show platform software icmp6

- show platform software infrastructure
- show platform software inspect statistics
- show platform software interface
- show platform software ip
- show platform software ipc
- show platform software iphc
- show platform software ipsec
- show platform software ipv6
- show platform software loadinfo
- show platform software mlist
- show platform software mlp
- show platform software mlppp
- show platform software module
- show platform software mpls
- show platform software multicast
- show platform software nat
- show platform software nbar
- show platform software netflow
- show platform software object-manager
- show platform software os-interface
- show platform software pam
- show platform software peer
- show platform software punt
- show platform software push-counter
- show platform software qos
- show platform software sbc tables
- show platform software shell
- show platform software slot
- show platform software spi4
- show platform software urpf
- show platform software vlans
- show platform software vty
- show platform software wccp

- show platform software zone statistics
- test platform hardware eobc
- test platform hardware port
- test platform hardware slot
- test platform hardware subslot
- test platform software cef
- test platform software chassis
- test platform software debug
- test platform software forwarding-manager
- test platform software infrastructure
- test platform software inject
- test platform software process
- test platform software shell
- test platform software tdl
- test platform software trace
