

NETCONF Event Notifications

Cisco Enterprise NFVIS generates event notifications for key events. A NETCONF client can subscribe to these notifications for monitoring the progress of configuration activation and the status change of the system and VMs.

There are two types of event notifications: nfvisEvent and vmlcEvent (VM life cycle event)

To receive event notifications automatically, you can run the NETCONF client, and subscribe to these notifications using the following NETCONF operations:

- --create-subscription=nfvisEvent
- --create-subscription=vmlcEvent

You can view NFVIS and VM life cycle event notifications using the **show notification stream nfvisEvent** and **show notification stream vmlcEvent** commands respectively. For more information see, Event Notifications.

- nfvisEvent, on page 2
- vmlcEvent, on page 19
