

About Cloud-Delivered Firewall Management Center

Security Cloud Control is the platform for the Cloud-Delivered Firewall Management Center.

The Cloud-Delivered Firewall Management Center is a software-as-a-service (SaaS) product that manages Secure Firewall Threat Defense devices. It offers many of the same functions as an on-premises Secure Firewall Management Center, it has the same appearance and behavior as an on-premises Secure Firewall Management Center, and uses the same FMC REST API.

This product is designed for Secure Firewall Management Center customers who want to move from an on-premises version of the Secure Firewall Management Center to a SaaS version.

The Security Cloud Control operations team is responsible for maintaining the SaaS product. As new features are introduced, the Security Cloud Control operations team updates Security Cloud Control and the Cloud-Delivered Firewall Management Center for you.

A migration wizard is available to help you migrate your Secure Firewall Threat Defense devices registered to your on-premises Secure Firewall Management Center to the Cloud-Delivered Firewall Management Center.
