Cisco Firepower Classic Device Compatibility Guide

This guide provides software and hardware compatibility for Classic and legacy Firepower devices. For related compatibility guides, see the following table.

Note Not all software versions, especially patches, apply to all platforms. A quick way to tell if a version is supported is that its upgrade/installation packages are posted on the Cisco Support & Download site. If the site is "missing" an upgrade or installation package, that version is not supported. You can also check the release notes and End-of-Life Announcements, on page 11. If you feel a version is missing in error, contact Cisco TAC.

ASA 5500-X Series and ISA 3000 with FirePOWER Services

The ASA FirePOWER module runs on the separately upgraded ASA operating system. There is wide compatibility between ASA and ASA FirePOWER versions. However, upgrading allows you to take advantage of new features and resolved issues. For example, the Firepower captive portal feature requires at least ASA FirePOWER Version 6.0.0 *and* ASA 9.5(2).

Version 7.0.0 is the last major release that supports ASA FirePOWER.

The following table shows the ASA, ASDM, and ASA FirePOWER support. If you are using an FMC to manage ASA FirePOWER, you can ignore the ASDM requirements.

Note that:

- ASA 9.14/ASDM 7.14/Firepower 6.6 is the final version for the ASA FirePOWER module on the ASA 5525-X, 5545-X, and 5555-X.
- ASA 9.12/ASDM 7.12/Firepower 6.4.0 is the final version for the ASA FirePOWER module on the ASA 5515-X and 5585-X.
- ASA 9.9/ASDM 7.9(2)/Firepower 6.2.3 is the final version for the ASA FirePOWER module on the ASA 5506-X series and 5512-X.

Note

- ASDM versions are backwards compatible with all previous ASA versions, unless otherwise stated. For example, ASDM 7.13(1) can manage an ASA 5516-X on ASA 9.10(1).
- ASDM is not supported for FirePOWER module management with ASA 9.8(4.45)+, 9.12(4.50)+, 9.14(4.14)+, and 9.16(3.19)+; you have to use FMC to manage the module with these releases. These ASA releases require ASDM 7.18(1.152) or later, but ASDM support for the ASA FirePOWER module ended with 7.16.
- ASDM 7.13(1) and ASDM 7.14(1) did not support ASA 5512-X, 5515-X, 5585-X, and ASASM; you must upgrade to ASDM 7.13(1.101) or 7.14(1.48) to restore ASDM support.

Classic Device Management

These tables list the supported devices and management methods for Classic devices, by version.

The FMC can remotely manage multiple Firepower devices, including ASA FirePOWER modules (but not ASA firewall functions). The FMC must run the same or newer version as its managed devices.

Use ASDM to manage one ASA FirePOWER module. ASA FirePOWER is a separately installed module on an ASA device. Traffic is sent to the module after ASA firewall policies are applied. Newer versions of ASDM can manage newer ASA FirePOWER modules.

About Firepower Version 5.4 Release Sequences

Version 5.4 sequences support different NGIPS appliance models and device management methods.

Table 9: Platform Support for Version 5.4 Release Sequences

Device Version	Supported Devices	Management Methods
5.4.1	ASA FirePOWER: • ASA 5506-X series, 5508-X, 5516-X • ISA 3000 (5.4.1.7+)	You can manage Version 5.4.1 devices with a Version 5.4.1 Defense Center. ASDM is also supported.
5.4.0	7000/8000 series, NGIPSv, and legacy devices ASA FirePOWER: • ASA 5512-X, 5515-X, 5525-X, 5545-X, 5555-X • ASA 5585-X series	There are no patches for Version 5.4.0 Defense Centers. We recommend you use a Version 5.4.1 Defense Center to manage Version 5.4.0 devices. ASDM is not supported in Version 5.4.0.

Note that Version 5.4.0.2/5.4.1.1 is the minimum for direct upgrade to Version 6.0.0. It is also the minimum device version that can be managed by Version 6.0.0, 6.0.1, and 6.1.0 Defense Centers/FMCs.

Parallel Release Sequences

Version 5.4.x releases are in parallel, starting with Version 5.4.0.1/5.4.1.0. For each pair, the Version 5.4.0.x release uses a last digit that is one more than the last digit of its parallel Version 5.4.1.x release:

- 5.4.0.1 (no longer supported) and 5.4.1.0
- 5.4.0.2 and 5.4.1.1
- 5.4.0.3 and 5.4.1.2
- … and so on

End-of-Life Announcements

The following tables provide end-of-life details. Dates that have passed are in **bold**.

Snort 2

If you are still using the Snort 2 inspection engine with threat defense, switch to Snort 3 now for improved detection and performance. It is available starting in threat defense Version 7.0+ with management center. Snort 2 is deprecated in Version 7.7+, and prevents threat defense upgrade.

In management center deployments, upgrading to threat defense Version 7.2–7.6 also upgrades eligible Snort 2 devices to Snort 3. For devices that are ineligible because they use custom intrusion or network analysis policies, manually upgrade Snort. See *Migrate from Snort 2 to Snort 3* in the Firepower Management Center Snort 3 Configuration Guide.
