

# User Interface Commands

This chapter contains the following sections:

- configure, on page 2
- disable, on page 3
- do, on page 4
- enable, on page 5
- end, on page 6
- exit (Configuration), on page 7
- exit (EXEC), on page 8
- help, on page 9
- history, on page 10
- history size, on page 11
- login, on page 12
- terminal datadump, on page 13
- terminal history, on page 14
- terminal history size, on page 15
- terminal prompt, on page 16
- terminal width, on page 17
- show banner, on page 18
- show history, on page 19
- show privilege, on page 20

# configure

To enter the Global Configuration mode, use the **configure** Privileged EXEC mode command.

### Syntax

**configure** [***terminal***]

### Parameters

**terminal**—(Optional) Enter the Global Configuration mode with or without the keyword terminal.

### Command Mode

Privileged EXEC mode

### Example

The following example enters Global Configuration mode.

```
switchxxxxxx# configure
switchxxxxxx(config)#
```

# disable

To leave the Privileged EXEC mode and return to the User EXEC mode, use the **disable** Privileged EXEC mode command.

### Syntax

**disable** [*privilege-level*]

### Parameters

**privilege-level**—(Optional) Reduces the privilege level to the specified privileged level. If privilege level is left blank, the level is reduce to the minimal privilege level.

### Default Configuration

The default privilege level is 15.

### Command Mode

Privileged EXEC mode

### Example

The following example returns the user to user level 1.

```
switchxxxxxx# disable 1
switchxxxxxx#
```

# do

To execute an EXEC-level command from Global Configuration mode or any configuration submode, use the **do** command.

### Syntax

**do** *command*

### Parameters

**command**—Specifies the EXEC-level command to execute.

### Command Mode

All configuration modes

### Example

The following example executes the **show vlan** Privileged EXEC mode command from Global Configuration mode.

```
switchxxxxxx(config)# do show vlan
```

| Vlan | Name | Ports | Type | Authorization |
|---|---|---|---|---|
| ---- | ---- | ----- | ---- | ---------- |
| 1 | 1 | gi1/0/1-4,Po1,Po2 | other | Required |
| 2 | 2 | gi1/0/1 | dynamicGvrp | Required |
| 10 | v0010 | gi1/0/1 | permanent | Not Required |
| 11 | V0011 | gi1/0/1,gi1/0/3 | permanent | Required |
| 20 | 20 | gi1/0/1 | permanent | Required |
| 30 | 30 | gi1/0/1,gi1/0/3 | permanent | Required |
| 31 | 31 | gi1/0/1 | permanent | Required |
| 91 | 91 | gi1/0/1,gi1/0/4 | permanent | Required |
| 4093 | guest-vlan | gi1/0/1,gi1/0/3 | permanent | Guest |

```
switchxxxxxx(config)#
```

# enable

To enter the Privileged EXEC mode, use the **enable** User EXEC mode command.

### Syntax

**enable** [*privilege-level*]

### Parameters

**privilege-level**—(Optional) Specifies the privilege level at which to enter the system.(Range: 1,7,15)

### Default Configuration

The default privilege level is 15.

### Command Mode

User EXEC mode

### Example

The following example enters privilege level 7.

```
switchxxxxxx#  enable 7
enter password:**********
switchxxxxxx# Accepted
```

The following example enters privilege level 15.

```
switchxxxxxx#  enable
enter password:**********
switchxxxxxx# Accepted
```

# end

To end the current configuration session and return to the Privileged EXEC mode, use the **end** command.

### Syntax

**end**

### Parameters

This command has no arguments or keywords

### Default Configuration

None

### Command Mode

All configuration modes

### Example

The following example ends the Global Configuration mode session and returns to the Privileged EXEC mode.

```
switchxxxxxx(config)# end
switchxxxxxx#
```

# exit (Configuration)

To exit any mode and bring the user to the next higher mode in the CLI mode hierarchy, use the **exit** command.

### Syntax

**exit**

### Parameters

This command has no arguments or keywords

### Default Configuration

None

### Command Mode

All configuration modes

### Examples

The following examples change the configuration mode from Interface Configuration mode to Privileged EXEC mode.

```
switchxxxxxx(config-if)# exit
switchxxxxxx(config)# exit
```

# exit (EXEC)

To close an active terminal session by logging off the device, use the **exit** User EXEC mode command.

### Syntax

**exit**

### Parameters

This command has no arguments or keywords

### Command Mode

User EXEC mode

### Example

The following example closes an active terminal session.

```
switchxxxxxx#  exit
```

# help

To display a brief description of the Help system, use the **help** command.

### Syntax

**help**

### Parameters

This command has no arguments or keywords

### Default Configuration

None

### Command Mode

All configuration modes

### Example

The following example describes the Help system.

```
switchxxxxxx# help
Help may be requested at any point in a command by entering a question mark '?'. If nothing
 matches the currently entered incomplete command, the help list is empty. This indicates
that there is no command matching the input as it currently appears. If the request is
within a command, press the Backspace key and erase the entered characters to a point where
 the request results in a match.
Help is provided when:
1. There is a valid command and a help request is made for entering a parameter or argument
 (e.g. 'show ?'). All possible parameters or arguments for the entered command are then
displayed.
2. An abbreviated argument is entered and a help request is made for arguments matching the
 input (e.g. 'show pr?').
```

# history

To enable saving commands that have been entered, use the **history** Line Configuration Mode command. To disable the command, use the **no** form of this command.

### Syntax

**history**

**no history**

### Parameters

This command has no arguments or keywords

### Default Configuration

Enabled.

### Command Mode

Line Configuration Mode

### User Guidelines

This command enables saving user-entered commands for a specified line. You can return to previous lines by using the up or down arrows.

It is effective from the next time that the user logs in via console/telnet/ssh.

The following are related commands:

- Use the terminal history size, on page 15 User EXEC mode command to enable or disable this command for the current terminal session.

  Use the history size, on page 11 Line Configuration Mode command to set the size of the command history buffer.

### Example

The following example enables the command for Telnet.

```
switchxxxxxx(config)# line telnet
switchxxxxxx(config-line)# history
```

# history size

To change the maximum number of user commands that are saved in the history buffer for a particular line, use the **history size** Line Configuration Mode command. To reset the command history buffer size to the default value, use the **no** form of this command.

### Syntax

**history size** *number-of-commands*

**no history size**

### Parameters

**number-of-commands**—Specifies the number of commands the system records in its history buffer.

### Default Configuration

The default command history buffer size is 10 commands.

### Command Mode

Line Configuration Mode

### User Guidelines

This command configures the command history buffer size for a particular line. It is effective from the next time that the user logs in via console/telnet/ssh.

Use the **terminal history size** User EXEC mode command to configure the command history buffer size for the current terminal session.

The allocated command history buffer is per terminal user, and is taken from a shared buffer. If there is not enough space available in the shared buffer, the command history buffer size cannot be increased above the default size.

### Example

The following example changes the command history buffer size to 100 entries for Telnet.

```
switchxxxxxx(config)# line telnet
switchxxxxxx(config-line)# history size 100
```

# login

To enable changing the user that is logged in, use the **login** User EXEC mode command. When this command is logged in, the user is prompted for a username/password.

### Syntax

**login**

### Parameters

This command has no arguments or keywords

### Command Mode

User EXEC mode

### Example

The following example enters Privileged EXEC mode and logs in with the required username ‘bob’.

```
switchxxxxxx#  login
User Name:bob
Password:*****
switchxxxxxx#
```

# terminal datadump

To enable dumping all the output of a show command without prompting, use the **terminal datadump** User EXEC mode command. To disable dumping, use the **no** form of this command.

### Syntax

**terminal datadump**

**terminal no datadump**

### Parameters

This command has no arguments or keywords

### Default Configuration

When printing, dumping is disabled and printing is paused every 24 lines.

### Command Mode

User EXEC mode

### User Guidelines

By default, a **More** prompt is displayed when the output contains more than 24 lines. Pressing the **Enter** key displays the next line; pressing the **Spacebar** displays the next screen of output.

The **terminal datadump** command enables dumping all output immediately after entering the show command by removing the pause.

The width is not limited, and the width of the line being printed on the terminal is based on the terminal itself.

This command is relevant only for the current session.

### Example

The following example dumps all output immediately after entering a show command.

```
switchxxxxxx#  terminal datadump
```

# terminal history

To enable the command history function for the current terminal session, meaning that it will not be stored in the Running Configuration file, use the **terminal history** User EXEC mode command. To disable the command, use the **no** form of this command.

### Syntax

**terminal history**

**terminal no history**

### Parameters

This command has no arguments or keywords

### Default Configuration

The default configuration for all terminal sessions is defined by the history, on page 10 Line Configuration Mode command.

### Command Mode

User EXEC mode

### User Guidelines

The command enables the command history for the current session. The default is determined by the history, on page 10 Line Configuration Mode command.

This command is effective immediately.

### Example

The following example disables the command history function for the current terminal session.

```
switchxxxxxx#  terminal no history
```

# terminal history size

To change the command history buffer size for the current terminal session, meaning it will not be stored in the Running Configuration file, use the **terminal history size** User EXEC mode command. , use the **no** form of this command to reset the command history buffer size to the default value.

### Syntax

**terminal history size** *number-of-commands*

**terminal no history size**

### Parameters

**number-of-commands**—Specifies the number of commands the system maintains in its history buffer. (Range: 10–206)

### Default Configuration

The default configuration for all terminal sessions is defined by the history size, on page 11 Line Configuration Mode command.

### Command Mode

User EXEC mode

### User Guidelines

The **terminal history size** EXEC command changes the command history buffer size for the current terminal session. Use the history, on page 10 Line Configuration Mode command to change the default history buffer size.

The maximum number of commands in all buffers is 207.

### Example

The following example sets the command history buffer size to 20 commands for the current terminal session.

```
switchxxxxxx# terminal history size 20
```

# terminal prompt

To enable the terminal prompts, use the **terminal prompt** User EXEC mode command. To disable the terminal prompts, use **terminal no prompt** command.

The command is per session and will not be saved in the configuration database.

### Syntax

**terminal prompt**

**terminal no prompt**

### Parameters

This command has no arguments or keywords

### Default Configuration

The default configuration is prompts enabled.

### Command Mode

Privileged EXEC mode

### Example

The following example disables the terminal prompts

```
switchxxxxxx# terminal no prompt
```

# terminal width

To determine the width of the display for the echo input to CLI sessions, use the **terminal width** User EXEC mode command. To return to the default, use **terminal no width**.

The command is per session and will not be saved in the configuration database.

### Syntax

**terminal width** *number-of-characters*

**terminal no width**

### Parameters

**number-of-characters** - Specifies the number of characters to be displayed for the echo output of the CLI commands and the configuration file,'0' means endless number of characters on a screen line. (Range: 0, 70-512)

### Default Configuration

The default number of characters is 77.

### Command Mode

Privileged EXEC mode

### Example

The following example sets the terminal width to 100 characters

```
switchxxxxxx# terminal width 100
```

# show banner

To display the banners that have been defined, use the **show banner** commands in User EXEC mode.

### Syntax

**show banner login**

**show banner exec**

### Parameters

This command has no arguments or keywords

### Command Mode

User EXEC mode

### Examples

```
switchxxxxxx# show banner login
------------------------------------------------------------

Banner: Login
Line SSH: Enabled
Line Telnet: Enabled
Line Console: Enabled
switchxxxxxx# show banner exec
Banner: EXEC
Line SSH: Enabled
Line Telnet: Enabled
Line Console: Enabled
You have logged on
```

# show history

To list the commands entered in the current session, use the **show history** User EXEC mode command.

### Syntax

**show history**

### Parameters

This command has no arguments or keywords

### Command Mode

User EXEC mode

### User Guidelines

The buffer includes executed and unexecuted commands.

Commands are listed from the first to the most recent command.

The buffer remains unchanged when entering into and returning from configuration modes.

### Example

The following example displays all the commands entered while in the current Privileged EXEC mode.

```
switchxxxxxx# show version
SW version 3.131 (date 23-Jul-2005 time 17:34:19)
HW version 1.0.0
switchxxxxxx# show clock
15:29:03 Jun 17 2005
switchxxxxxx# show history
show version
show clock
show history
3 commands were logged (buffer size is 10)
```

# show privilege

To display the current privilege level, use the **show privilege** User EXEC mode command.

### Syntax

**show privilege**

### Parameters

This command has no arguments or keywords

### Command Mode

User EXEC mode

### Example

The following example displays the privilege level for the user logged on.

```
switchxxxxxx# show privilege
Current privilege level is 15
```
