Work with Space Utilization App

The Cisco Spaces: Space Utilization App offers historical insights into how your physical spaces are used, aiding in space optimization. These insights are gathered from data collected via sensors embedded within your space's networking and collaboration infrastructure.

This app allows you to view the occupancy and utilization for any physical space within a campus, building, or floor. This information includes data such as people count, peak utilization metrics, room utilization metrics and time spent by people in that physical space.

For Cisco Spaces accounts in the Workspace and Education verticals, both Floor Occupancy and Room Occupancy metrics are displayed. By default, for accounts in all other verticals, the following message is displayed: *Occupancy charts are only available to Workspaces / Education vertical*.

Use **Room Occupancy Reports** feature to generate an occupancy report with the data including the number of people present in the room that is aggregated in a window of every 15 minutes. This feature provides the flexibility to download and categorize the people count data based on their preferred reporting time intervals, such as 15, 30, or 60 minutes.

The Glossary enhancements in the **Space Utilization** app provide a consolidated and comprehensive set of definitions for the various metrics and charts available across all views within the **Space Utilization** application. These definitions enhance user understanding and provide clarity on how data is presented and calculated.

For more information, refer to Cisco Spaces: Space Utilization App Guide.

Note The **Space Utilization** app is available to users with **Cisco Spaces ADVANTAGE** and **Cisco Spaces UNLIMITED** licenses.
