What's New in this Release

There are no new features in this release of Cisco Spaces.

What's Changed in this Release

The following enhancements are made in the Cisco Spaces beta UI:

Cisco Spaces: Space Utilization App

Portal Beam and PIR Sensor support: The Space Utilization App now supports the reporting of occupancy data from various sources such as collaboration devices, portal beams and PIR sensors (such as Thingsee and Moko).

Space Utilization App UI updates: The Space Utilization App UI is enhanced to improve user navigation and provide a more intuitive interface.

- **Dynamic Page Title**: The page title and filters now update automatically based on your selected view. You can quickly identify the specific building or floor and see which filter is applied.
- **Location** drop-down: The **Location Selection** drop-down list is now strategically repositioned to the right-hand side of the window. This filter is now available in both building and floor views, enabling you to switch between locations more efficiently.

Locations & Maps: Catalyst Center Export Option

In **Locations & Maps**, the **Digital Maps** feature (**Setup** > **Locations & Maps** > **Digital Maps** now lets you export building maps (published version) to Catalyst Center.

The option to export is available only for buildings with a published map. Click the three dots next to a building and select **Export to Catalyst Center** to process the map. Click **Download** to save the processed digital map (in ZIP format) for the selected building. Follow the instructions in the pop-up window to import the map hierarchy into Catalyst Center.

Note The map export feature works only if the APs are placed under the **Setup** > **Device Placement** option.

Change Log Feature Enhancements

Use the **View Change Log** feature (**Home** > **Profile**) to track audit trail activities for **Location & Maps** and **Space Utilization App** in the Cisco Spaces new UI.

Issues

Issues describe unexpected behavior in the Cisco Spaces application.
