Ultra Cloud Core - Access and Mobility Management Function, Release 2026.03.1

This Release Notes identifies changes and issues related to the Access and Mobility Management Function (AMF).

For more information on the AMF software, see the Related resources section.

Release Lifecycle Milestones

This table provides EoL milestones for Cisco Ultra Cloud Core – Access and Mobility Management Function software:

Table 1. EoL milestone information for UCC AMF, Release 2026.03.1

Milestone	Date
First Customer Ship (FCS)	23-July-2026
End of Life (EoL)	23-July-2026
End of Software Maintenance (EoSM)	31-Jan-2028
End of Vulnerability and Security Support (EoVSS)	31-Jan-2028
Last Date of Support (LDoS)	31-Jan-2029

These milestones and the intervals between them are defined in the Cisco Ultra Cloud Core (UCC) Software Release Lifecycle Product Bulletin available on cisco.com.

New software features

This section provides a brief description of the new software features introduced in this release.

Table 2. New software features for UCC AMF, Release 2026.03.1

Product impact	Feature	Description
Software Reliability	Multiple MME peer selection	AMF now supports configuring multiple peer MME IP addresses for a single peer-mme tai-match entry. This enhancement improves peer MME selection flexibility and service availability by allowing AMF to select from multiple MME endpoints matching the same MCC, MNC, and TAC criteria. AMF can select up to three IP addresses for each peer MME selection attempt. Command introduced: **amf-services** *service_name* **{ peer-mme tai-match priority** *priority_value* **| mcc** *mcc_value* **| mnc** *mnc_value* **| tac** *tac_value* **[to** *end_tac_value* **] | address** *mme_ip-address_list* **}** – Configures a list of peer MME IP addresses for the specified MCC, MNC, and TAC criteria. **Default Setting**: Disabled – Configuration Requiredss

Changes in behavior

There are no behavior changes in this release.

Resolved issues

This table lists the resolved issues in this specific software release.

Note: This software release may contain bug fixes first identified in other releases. To see additional information, click the bug ID to access the Cisco Bug Search Tool. To search for a documented Cisco product issue, type in the browser: <bug_number> site:cisco.com

Table 3. Resolved issues for UCC AMF, Release 2026.03.1

Bug ID	Description
CSCww09410	lbo-roaming-allowed true cli configuration does not override local breakout configuration
CSCww17409	Protocol pod is sending the ngap message to incorrect service pod
CSCww31289	AMF sending wrong NCC value towards UE in handover required during 4G to 5G handover
CSCww31296	AMF is not responding to relocation cancel request send my MME

Open issues

This table lists the open issues in this specific software release.

Note: This software release may contain open bugs first identified in other releases. To see additional information, click the bug ID to access the Cisco Bug Search Tool. To search for a documented Cisco product issue, type in the browser: <bug_number> site:cisco.com

Table 4. Open issues for UCC AMF, Release 2026.03.1

Bug ID	Description
CSCwv54865	one of the service pod memory leak observed during 7K TPS longevity
CSCwv64244	T-AMF is not gracefully handling the collision of N2HO and registration procedure during SCTP Pod resiliency scenario

Compatibility

This section lists compatibility information of the Cisco UCC software products that are verified to work with this version of the UCC AMF software.

Table 5. Compatibility information for UCC AMF, Release 2026.03.1

Product	Supported Release
Ultra Cloud Core SMI	2026.03.1.08
Ultra Cloud CDL	2.3.0

© 2026 Cisco and/or its affiliates. All rights reserved.

Supported software packages

This section provides information about the release packages associated with UCC AMF software.

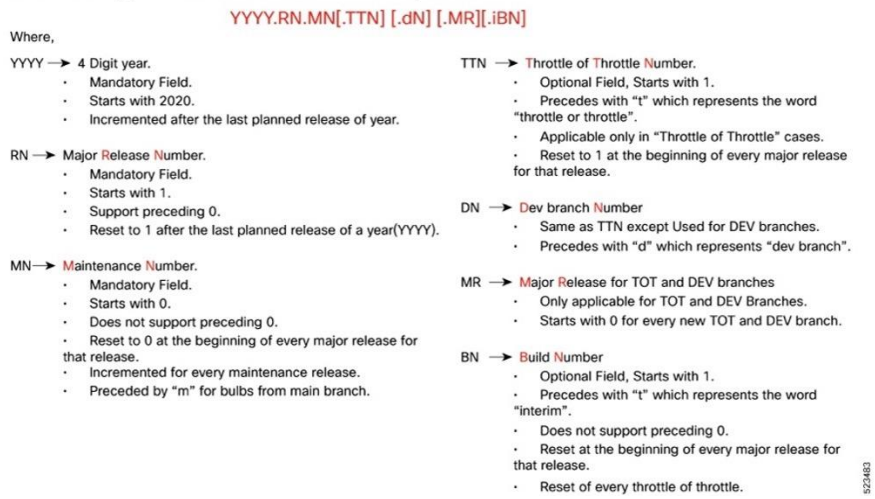

Table 6. Software packages for UCC AMF, Release 2026.03.1

Software Package	Version
amf.2026.03.1.SPA.tgz	2026.03.1
cdl-2.3.0-amf-2026.03.1.SPA.tgz	2.3.0
NED package	ncs-6.4.8.3-amf-nc-1.1. 2026.03.1
NSO	6.4.8.3

Cloud native product version numbering system

The show helm list command displays detailed information about the version of the cloud native product currently deployed.

Figure 1. **Cloud native product versioning format and description**

The appropriate version number field increments after a version has been released. The new version numbering format is a contiguous sequential number that represents incremental changes between releases. This format facilitates identifying the changes between releases when using Bug Search Tool to research software releases.

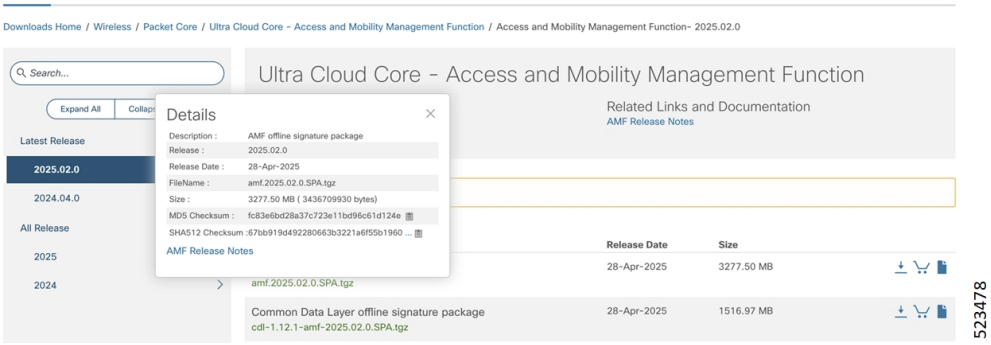

Software Integrity Version

To verify the integrity of the software image you have from Cisco, you can validate the SHA512 checksum information against the checksum identified by Cisco for the software.

Image checksum information is available through **Cisco.com Software Download Details**. To find the checksum, hover the mouse pointer over the software image you have downloaded.

© 2026 Cisco and/or its affiliates. All rights reserved.

Figure 2. Sample of AMF software image

At the bottom you find the SHA512 checksum, if you do not see the whole checksum you can expand it by pressing the "..." at the end.

To validate the information, calculate a SHA512 checksum using the information in the following table and verify that it matches the one provided on the software download page.

To calculate a SHA512 checksum on your local desktop, see this table.

Table 7. SHA512 checksum calculation commands by operating system

Operating System	SHA512 checksum calculation command examples
Microsoft Windows	Open a command line window and type the following command: > certutil.exe -hashfile <filename.extension> SHA512
Apple MAC	Open a terminal window and type the following command: $ shasum -a 512 <filename.extension>

Linux	Open a terminal window and type the following command:
	$ sha512sum <filename.extension>
	OR
	$ shasum -a 512 <filename.extension>

<filename> is the name of the file. <extension> is the file type extension (for example, .zip or .tgz).	

If the SHA512 checksum matches, you can be sure that no one has tampered with the software image or the image has not been corrupted during download.

If the SHA512 checksum does not match, we advise you not to attempt upgrading any systems with the corrupted software image. Download the software again and verify the SHA512 checksum again. If there is a constant mismatch, please open a case with the Cisco Technical Assistance Center.

Certificate Validation

AMF software images are signed via x509 certificates. Please view the .README file packaged with the software for information and instructions on how to validate the certificates.
